After you are enrolled in NetID+, use this procedure for setting up a Lifeline for NetID+.

What is a Lifeline?

A Lifeline is considered your “method of last resort,” and would be used as your NetID+ second factor of authentication, should your regular devices be unavailable.

A Lifeline phone usually belongs to a person you trust and with whom you can easily communicate. Your “Lifeline’s” device can be a landline or cell phone.

1. Go to the UA NetID+ login page (https://webauth.arizona.edu/netid-plus/), and login, using your preferred method of two-factor authentication.

2. You will see the following screen until you set up at least one Lifeline:

3. Select an option for your Lifeline (either +Add a LIFELINE Phone WITH Text Messaging or +Add a LIFELINE Phone WITHOUT Text Messaging). For this tutorial, we will Add a LIFELINE Phone WITHOUT Text Messaging.
4. Name your **Lifeline phone**, and click **Continue**.

![Choose a Name](image1)

**NOTE:** You should make sure that the person you are choosing as your Lifeline is available to receive either a text message or a voice call when you are setting up the Lifeline. Make sure that person is available at the time you set up the Lifeline.

![Choose a Name](image2)

5. The following screen will appear:

![Phone Number](image3)

a. Enter your **Lifeline phone number**. The default country is the United States. You can use the dropdown by the flag to select another country, if necessary.

b. Click the checkbox by **Please check to confirm your phone number**.

c. Click **Continue**.
6. The NetID+ system will call the Lifeline phone. Your Lifeline should contact you and give you the verification code. Enter the verification code on your computer screen, and click Continue.

A phone call is being placed to (520) 581-1234 to provide the verification code. Please enter the code and click the Continue button to complete verification.

7. You will see the next screen, indicating that your Lifeline device has been registered.

Success!
You have successfully registered your device with NetID+
