After you are enrolled in NetID+, you can generate bypass codes to use as a second factor of authentication. Bypass codes are useful when traveling, especially during international travel, when cell phone carriers may charge additional fees for calls and texts.

Bypass Codes are one-time use codes. The NetID+ system will generate 10 codes each time you request more.

1. Login using your NetID and password. Click Login.

2. The NetID+ screen will appear. Use one of your Bypass Codes. (Make note of the one you used, as these codes are good for one use only.) Click Login.
